Dear Sir,

I would like to report to you the results we have experienced with your products. About two years ago we pulled a 525 Horsepower Cummins powered dredge booster pump out of the storage yard. We had the engine rebuilt and installed the PFL 900 formula diesel engine treatment. The pump has a large bearing housing with double roller bearings. During several years of storage the housing filled up with water and the bearings were rusted so bad we couldn't move the pump with a six foot bar. We drained off the water and filled the housing with 100% Permafused H.D. Gear and Differential Treatment. After starting the engine we continued to bump the bearings with the clutch until they finally broke loose. The pump vibrated at first, but in time the vibration subsided.

We called the factory about replacement bearings, they were available for \$5,000.00 each. We decided to place the pump in service expecting them to last about a week or two. Two years and 3,000 hours of extremely hard service later this pump and the engine are still in good operating condition.

The engine for this pump should be at least 750 horsepower. So at 525 horsepower this engine has been operated in an extremely overloaded condition. We have used your products in all of our vehicles with great satisfaction. We have found your penetrating spray to perform really great in the salt water conditions. We are looking forward to having Permafused protection for our hydraulic systems as well.

Sincerely,
